el_readme_sdsi_v71-3 (.txt and .pdf) ... 31-Jul-2008 by mje
(v71-3 \text{ mods for async subjobs to speed print delivery})
SDSI unForm e-Enabled Rule Files and Auxiliary Files
    ( e-Enabled: enabled for unForm eArchive and eDeliver functionality )
File name: esdsi_v71-3.zip
Place the zip file in the main unform server folder.
Extract into the main unform server folder, making sure that if you get
or have a default folder prompt from your unzip utility, change the
folder to be the main unform server folder itself, rather than a
separate sub-folder.
 ** Once downloaded, see the "e2_readme_sdsi_v71-3.pdf" PDF document
    in the ehelp/ folder for more information.
Contents of the zip file:
Folders:
                                 demo recipient address CSV files
  eAddress
                                 demo text files used by demo scripts demo text files used by demo scripts
  edemotxt
  edemobatch
  ehelp
                                 help resources folder
  eLog
                                 default eDelivery log folder
Rule Files:
  enhance_sdsi_v71-3.rul
                                      sample demo enhancement rule file
  eArchive_sdsi_v71-3.rul
                                      eArchive parallel rule file
  eDeliver_sdsi_v71-3.rul
                                      eDeliver parallel rule file
  eDeliverEngine_sdsi_v71-3.rul
                                     eDeliver Engine rule file, do not modify
 Script Files:
                         unix demo script off edemotxt dir
  esdsidemo.sh
  esdsidemo.vbs
                         windows demo script off edemotxt dir
                         unix demo script off edemobatch dir
  esdsidemo2.sh
  esdsidemo2.vbs
                         windows demo script off edemobatch dir
```

## Demo procedures:

- Configure the smtp server= line in prog/mailcall.ini to point to your mail server, and/or make sure msfax or another fax server is set up
- optionally ... Edit eDel and eArc paths at top of enhance\_sdsi\_v71-3.rul file note that if the merge command rule file is set to "./" followed by the eDel\* or eArc\* file name, and enabled, no change should be needed
  - optionally ... Edit paths in [X EDELIVER GLOBAL SETUP] rule-set of eDeliver rule file ... but NOT the eDeliverEngine rule file ... note that if the EDOC\_MERGEPATH global is set to "." and enabled no change should be needed
  - optionally ... Edit paths in [X EARCHIVE GLOBAL SETUP] rule-set of eArchive rule file(s) ... note that if the EARC\_MERGEPATH global is set to "." and enabled no change should be needed
- check or edit paths in the esdsidemo shell or vbs script(s)
- For email, in the [X EDELIVER GLOBAL SETUP] rule-set, find the EDOC\_CCFORCE global constant, and place your internal testing email address there, be sure to save the file, and/or publish it from the unForm designer.
- Execute the shell scripts, logged in as root from the main unForm server folder ... these scripts launch client jobs on the edemotxt samples and email and fax and archive the sample documents
- Check for successful delivery; check for successful archive
- Check the eLog folder for a log file dated with the current date, and review the contents of the log file
